Republicans Representatives

Who is Your Message for: Republicans Representatives

As my late mother would say "Get into the 21st Century." The age of oil is over. Fracking is not environmentally sound and in time will become more costly than alternate forms of energy. Why would Connecticut want to bring in fracking waste? We have already compromised our clean air and water, I believe. Do it prove greed that people want to further comprise our environment? The maintenance of clean air and water is the greatest moral and ethical issue facing the people of Connecticut.

Bringing in hazardous waste may add to health care costs as well as other costs to the earth and all the other creatures that human life depends on.

I urge you to prohibit the storage or disposal of fracking waste in CT by supporting S.B # 237.
