

Obviously Connecticut is losing jobs daily. Equally obviously the U. S. has a new president who supports a green environment. I request that this committee support HB 6635 to ensure Connecticut has a clean environment and continued employment.

The Federal Compromise Stimulus Plan includes \$13.9 billion dollars to subsidize loans for renewable energy projects and \$6.3 billion in state energy and efficiency and clean energy grants. With this incentive, Connecticut should follow the lead of states like New Jersey and California and make a commitment to alternative energy such as solar power.
