

I and my husband, presently have Husky B, for our child, whom is special needs, multi-handicaped, and disabiling... She is Profoundly deaf, has medical problems, including Type 1 Diabetis and lots of developemntal problems with learning disabilities...

We pay presantly \$195.00 a month for Husky B, and have a hard time paying that, with all that in-corporates with every-thing to do with her and myself... I am Type 1 Diabetic, myself, so here, times all by two, and husband has medically issues to deal with as-well... \$195.00 doesn't sound like an awfull lot to some people, but if the price of Husky B premium goes up, more then \$195.00 as Governor proposes, then this State Insurance will be out of reach for this family, as-well... and my child and lot's of other children also... and then will be with-out health coverage period... State insurance is suppose to be at an affordable rate of sort, so child can recieve medical period... I myself, with my Type 1 Diabetis as bad as it is, is on SSDI with lots of complications of this diabetis, and trying just to keep my finacle head above water... I bring home a income on SSDI of \$603.00 a month, total, and out of that \$98.00 for regular medicare, and then \$99.00 for medicare advantage plan, and that is rising through the roff... and with DME is alot more... and to sum this up out of the \$603.00 a month, \$500.00 comes to medical for me and child, and I am the one that buys the groceries so \$101.00 a month for food... Three people, two Type 1 Diabetics and yikes... we don't have any more to give towards any medical, and child will find herself, with-out health insurance, and State Health Insurance at that, didn't the Federal Government just send stimulas dollars towards our children, and State Medical Insurace... Raise the premiums, and you leave the most vulnerable population, with-out medical and with-out medical care going forward... Hurting our children, with this is just not right, and something else needs to be done... please... Lisa Lessard

You Governmental people should, be able to come up with a plan, other then placing the burden on that of the backs of this States children... that aren't lucky enough to have parents, that have employers, that will give them Health benefits, so they can be taken care of... that is not our childrens fault... so why, raise premiums for Husky B, and have our children see it to be their fault... I thought State Health Insurance was there, in the first place, to help our children, so they can grow and become productive adults with-in our work force... Can be healthy children, so they can learn, and do what needed to be productive, active adults with-in our work force... ONLY A THOUGHT... GOD BLESS...
