Scott

We purchased our wood stove from you about 5 years ago and it is one of the best investments we have ever made. We are clearing our land slowly by cutting dead wood and trees that need cutting-this wood can be burned green as well as seasoned-our house has never been warmer-it stays the same temperature all the time--doesn't fluctuate like a furnace does plus it heats all our hot water-its great and we have not had to buy any oil from overseas for the last 5 years-

This stove does give off some smoke but mostly when the wood is wet or green-where we are located the smoke is not a problem as we have no close neighbors. For farmers or people like us that live in isolated places this stove is a fantastic piece of equipment-it saves us money and heats our houses-barns and helps clear our land and the ashes go into our compost pile and goes back into the earth as fertilizer.

With our hard economic times and farmers struggling to stay alive this woodstove has been a godsend and should not be banned because of a few poorly installed stoves by people who don't understand how they work.

Sincerely Earl Clements
