Subject: Meeting Monday

This letter is in regards to the possibility of us not being able to use our OWF. Not only do we heat our home with an OWF, wood has been used to heat this home over the past 265 years. I am sure that in that 265 year span, no one has complained about the hazards of smoke heating this home has produced. This OWF is by far the most efficient way to heat our home. We no longer have to rely on foreign oil while heating this home with wood.

The ban would also be a tremendous blow to our family economically. We own and operate a large scale firewood business. With 1200 satisfied wood burning customers each year we find more and more purchasing wood for their OWF.

In closing, in this troubled economy I find it extremely hard to believe that the government would interfere not only in my small business but in the way we choose to heat our home.

Thank you,
Jack and Lisa Wiese
