

Comments on Senate Bill #1 2011

Re: Solar and Wind, smart and sane alternatives

From: Noreen P. Cullen

Date March 15, 2011

Dear People;

We are out of time. Alternatives to nuclear and fossil fuels should have been developed many years ago. There is no question about the costs, both human and environmental, to nuclear. We can see that no nuclear should ever have received approval.

Connecticut can and must promote solar and wind technologies, creating jobs, stimulating a new industry in the state, and deploying the technology in-state to reduce our local electricity costs.

I would like to add my voice in support of promoting solar and wind technologies in Connecticut. Honestly, we are out of time.

Sincerely,

Noreen P. Cullen
