STATEMENT OF PURPOSE:

- (A) **Purpose:** Connecticut General Statutes Section 21a-243 permits the Commissioner of Consumer Protection to classify certain drugs as controlled substances. The purpose of these proposed regulations is to amend existing sections to add or remove certain drugs from the schedules of controlled substances.
- (B) **Summary:** The existing regulations for the schedules of controlled substances place drugs into five categories, Schedule I through Schedule V. The federal Controlled Substances Act also establishes the same five schedules of controlled substances. To aid the Department's enforcement efforts and to further cooperation with officials from other states, as well as with federal authorities, Connecticut's controlled substance schedules need to be consistent with the federal schedules. These proposed regulations add and remove certain drugs to make Connecticut's schedules consistent with the federal schedules.
- (C) **Legal Effects:** These proposed regulations alter the four lists of controlled substances set forth in sections 21a-243-7 through 21a-243-10, inclusive, of the current regulations. Drugs listed in these schedules of controlled substances are more highly regulated than other prescription drugs. These drugs have increased security and recording requirements, and violations of the associated laws yield greater criminal penalties. Therefore, the drugs added to the schedules of controlled substances by these proposed regulations will be more highly regulated, which will lead to a higher level of public safety.

PLEASE NOTE:

Within this proposed regulation, any text located within open and closed brackets that is, in turn, located wholly within open and closed parentheses, is intended to remain in the text, and not be deleted. The customary practice when editing regulations is to place any text to be deleted within open and closed brackets. However, in order to properly list the names of particular drugs, the use of brackets and parentheses is necessary. Text that is to be deleted is located solely within open and closed brackets, not also within open and closed parentheses.
