

The need for GMO labeling is the result of 20 years of GMO foods introduced into our food system with explicit specification from former Monsanto Lobbyist Mike Taylor, who heads up the FDA NOT TO TEST ANY GMO PRODUCT FOR TOXICITY. However tests are run for all non GMO food products and additives that come into the system. GMO seeds are patented. this differentiates them clearly from non GMO seed, which the FDA claims are the same, if they are the same, AS ALLEGED, WHY ARE THEY PATENTED?, and ordinary seeds are not? this is because they are different by their own standards, and this is the lie.

This obvious lie is the ROOT of you and I, farmers and our families and the rest of the consumers, being deprived of OUR RIGHT TO CHOOSE with labels telling us about the DIFFERENCE i.e the patent vs normal Non testing for toxicity vs testing. THESE DIFFERENCES NEED TO BE SEEN, UNDERSTOOD and expressed in a label so consumers can make a choice. Currently our RIGHT TO CHOOSE, is being denied by the absence of labels.
