

Please support the bill to require labeling of GMOs

H.B. No. 5117 (RAISED) AN ACT CONCERNING GENETICALLY-ENGINEERED FOODS

As a high school student who has spent a lot of time studying the matter, it is clear to see that GM foods pose a potentially serious risk to human health and natural balance.

Short and long term studies have not been well designed nor completed.

It would be difficult to trace which foods or crops caused allergies, illness or disrupted the food chain in nature with out careful regulations.

Thank you, Anthony Knoll
