

I am writing to raise my voice in support of bill 5007, an act concerning Genetically-Engineered Foods.

I think it is crucial to label all Genetically Engineered Foods.

In Europe, where the discussion focuses on limiting and even banning GMOs I think that Connecticut should be a leader in raising the issue of health risks related to GMOs.

Please stand up for health and people before big business and perform due diligence on this troubling trend to push through potentially dangerous food to our state.
