

I want my opinion supporting **Bill 5117 An Act Concerning Genetically-Engineered Foods** to be counted at the hearing tomorrow, 2/22/12.

I believe it is of critical importance at this moment to raise awareness for the insidious practice of genetic modifications of food and especially for those selling them without labelling them as such. No country in Europe would allow this. We must insist on labelling food that has been altered, because there is no scientific proof of its effect on humans. This is a vitally important issue that I am extremely concerned about. I have been actively communicating about the need for labelling to everyone I know.
