

Dear Leaders of the CT Environmental Committee:

Wood smoke is second hand smoke! Please stop the opportunist venture associated with the production and sale of wood burning appliances. Selling appliances that produce and spew smokey polluted air into residential neighborhoods and thereby ruining other innocent peoples' lives is wrong. If heating homes with wood was a panacea, oil and gas burners would never have been invented. Heating with wood 24/7 is simply polluting, free and selfish. Our present day world is too crowded for this behavior. Please encourage laws that will foster the production and sale of geothermal, solar and wind energy that will keep the only air we have free from polluting particulates.

Sincerely,

Jean Breuler, 53 Trumbull Hwy, Lebanon, CT 06249
