

Hi. We have a neighbor with a wood burning furnace/boiler across the street from us in Weston Ct. It is grandfathered in because it was installed before July 2005. It meets none of the current codes. It is within 400 feet of my house as well as 2 other neighbors. The stack is lower than all surrounding houses. We suffer the condensed pm2.5 smoke particles all day and night. We had to move our kids bedroom to lessen (not stop) their exposure to the smoke. The Weston/Westport health department, the EPA, and the Town Selectwoman cannot do anything to stop this pollution in our neighborhood. The state bans smoking in public places but cannot stop this basic violation of our right to breath clean air in our own homes. Please help us to shut this down. Our only hope is to try and sell our house in this bad real estate market.

Best
