

Hello, as a taxpayer of Connecticut and a mother of six, I am voicing my opinion on the gmo food labeling. Long studies have not been done on this food, and we have a right to know that this food is not produced naturally. We ,here in Connecticut ,have the choice of choosing raw milk and organic food to purchase, as we should, and if you intend to introduce poisoned food, which it has been shown to be, we have the right to know, just like on a round up bottle is labeled that it is poisenous. Dont make foods out of Connecticut residents and let our voices be heard.

Thank you, Cheryl Arend, mother of six healthy kids
