

Public Testimony in support of bill number 6533, an act banning fracking waste from coming into CT.

CT has a long history of handling wastes imported from other states especially in distressed communities such as New Haven and Bridgeport.

We are very concerned that waste products from fracking will be brought into CT for disposal. Many of the processes surrounding fracking are unregulated by the Clean Air or Clean Water Act.

This is a terrible federal mistake of failing to submit these processes to regulation. We need to protect CT from importing these waste products into our communities. They contain many hazardous chemicals.

Thank you.

Sincerely,

Lynne Bonnett
