

2/20/13

Please support the proposed bill HB5299 allowing trained non-medical staff to administer basic life saving medical care for our children exposed to seizures. The fact that their seizures are unpredictable means that they can happen anytime whether or not medical staff is around to administer proper care. Since there is no difference in exposure between a child with epilepsy and a child with allergies - why should there be a difference in the available care. Please support this bill - it will save lives and offer a higher level of peace of mind for these children and their families.

Regards, and Thank You - Valerie and Greg DiPrato
