

I ask you to oppose bill # 374

I understand that the goal is to gain early detection of possible behavioral issues but unfortunately only limiting the assessments to public enrolled students and home schooled children would leave out children who attend parochial and private schools within the same grades and or ages specified in this bill thus the goal and this bill not being completely effective, if the goal is to gain early detection of possible behavioral issues within these grades and age's specified than every single child in every single school who falls within this criteria must have the same assessment.

I oppose bill # 374 in its current language and you to do the same

I look forward to hearing your thought's  
Harold Douglas
