

HB 6519

Dear folks of our fine government:

I know you are receiving lots of emails today from all of us that are fired up about wanting our food labelled, but I'd like to tell you that I think that not only should GMOs be labelled, but they should be BANNED like in other, wiser countries. Nonetheless, the bill before us is about labeling, so please know that it is my wish that you support that bill.

You as our government have a responsibility to serve as our representatives and we do NOT want the corporations determining what to omit from their labels. It ALL needs to be named. We demand to know what is in our food and it is unconstitutional that it is kept from us--at least that's what I hope you will determine in these forthcoming proceedings.

Please support GMO labeling, for those of us who understand and know the potentially worse disaster that can affect our nation's health and future in the name of big profits for a few, we will not stand by and let this happen. We will continue to fight for our right to know until there is no fight left. Our numbers will grow and we will not give up.

I know many are sending you the reasons why, but I want to tell you that it's as simple as this: when you hide the truth from the people, you are lying to the people. No more lies. No more avoidance of the truth. Please mandate that companies label their food that contains GMOs.

Thank you.

Rachel
