

HB 6522

I know several people.... Including my epileptic, 51 year old brother/teacher who would greatly benefit from legislation allowing non-medical, yet fully trained personnel to administer this life saving drug. Please don't allow the ambulance chasers of the world to prevent good, trained school employees from saving lives. It seems like the threat of a lawsuit is the only possible obstacle standing in the way. That is so against the American ideal. When so many would benefit, why is this even an issue? Please do the right thing and empower people to save lives and help families stay in tact.

Respectfully,  
Barbara Hennelly
