

The abundance of deer in Connecticut is a true hazard. We have experienced a deer running into our car, my wife has had Lyme disease three times, we are reluctant to even work in the garden due to the possibility of contacting ticks. There are several deer eating our shrubs on an almost daily occurrence, on several occasions we have counted up to 24 deer on our 2 acre property in Weston.

Without natural predators thinning the deer population by controlled hunting is an important issue.
