Raised Bill 1134: An Act Concerning Outdoor Wood-Burning Furnaces

Honorable Members of the Environment Committee:

The Connecticut Environmental Health Association (CEHA) is a membership organization composed of a variety of environmental and public health professionals, but primarily consisting of local health department sanitarians.

**CEHA opposes Raised Bill 1134.**

In past legislative sessions, we have been on the record in our opposition to the use of outdoor wood furnaces. The research conducted by the Northeast States for Coordinated Air Use Management has consistently shown that the emissions from even the proper use of these units are a concern from both air quality and health effects perspectives.

In our opinion, RB 1134 does not go far enough in that by allowing the use of outdoor wood furnaces, residents, particularly those with preexisting respiratory issues, will still suffer from emissions from outdoor wood furnaces. This bill, although it may be considered a fair starting point to reduce emissions, does not serve to proactively protect the public's health in a meaningful way.

In a time when we, as a society, continue to search for "green" energy alternatives, we should not condone a technology which allows individuals to impact the surrounding community and create a hazardous and nuisance situation.

For these reasons, we oppose the passage of this bill. We encourage you to consider, as many Connecticut municipalities already have, a ban on the use of outdoor wood burning furnaces.

Thank you for your consideration of our opinion.
