

Gerald Lione

HB 6645

I believe we should oppose assisted suicide.

"Assisted suicide" is but one first step in a path to "convenient elimination".

If you doubt this, you perhaps are not familiar with history.

In addition, it could force unwilling medical personnel to assist in something they oppose.

If you doubt, look at the so called "concessions" of the current "health care" legislation.

Further, it is possible for a person contemplating assisted suicide to have a change of heart at a time when they are incapable of expressing that change.

There are too many ifs, ands and buts to legislate about this issue.
