Subject: Flu vaccine

I am writing in regards to the recent mandated flu vaccine bill proposals.

I have been a Registered Nurse for 21 years. I was also in the healthcare field for 4 years prior to that. I only contracted the flu virus twice in all of those years and that was the only two times when in fact I received the flu vaccine. The flu vaccine was proven ineffective in the elderly. Being healthcare providers we often have a better immunity from exposure over the years, therefore have a better chance of not contracting the flu virus. If we should happen to become ill with the flu we would stay home and not go to work. There is mercury, aluminum and other toxins in vaccines. I choose to not have these in my body. It is our choice. This nation was founded on our right to choose, that right should not be taken away from us. There should also be religious, personal, and medical exemptions allowed. The United States is a free country- lets keep it that way. Thank you for your time

Sincerely,

Audra Dillon Rn
