

Hello,

I'm writing to you to convey my concerns pertaining to fracking waste. This letter is pretty much plain and simple. We just can NOT have this going on. There is already enough issues with Connecticut waters. The Housatonic river is still screwed up from GE years ago. I live in Danbury and the still river is right in front of my house which is heavily polluted. Of course I'm sure you are all well informed about the pollution in the Naugatuck river as well. So many waters have already been polluted by lazy and uneducated people. We do NOT need another threat like fracking waste to potentially damage and destroy our waters and environment. We must preserve what we have before its gone. We simply can NOT and will NOT have it!

Sincerely,

Kyle Quine
angler and nature lover.
