

I am appalled by GMO grass! As a consumer, I have the option of choosing to purchase organic produce and meat. I try to support local ag as much as possible. If Connecticut accepts GMO grass , it could severely compromise our ecology and our ability to Offer organic meats and produce.

At the risk of sounding emotional, GMO assault must be stopped. It is an encroachment on those of us who are trying to protect the health of ourselves and Our families! If my neighbor or a neighboring farm chooses to plant the GMO grass, my own yard will almost certainly be infested with GMO pollen! Please do the right thing and ban this!
