

I strongly oppose the proposed law on lawn chemical on athletic fields, schools and other public places based on the selection criterion of using organic vs synthetic products. As a professional applicator I need to be able to choose the safest most effective product whether it is organic or synthetic if the products are approved by the EPA. Products should not be eliminated as a choose because they are synthetic. All synthetic products are thoroughly tested for safety and efficacy before they are approved for use on both public and private property. Organic implies safer when it is not any safer than currently labeled synthetic products. It has been my experience that organic pesticides lack efficacy and are not any safer.

Thank you
