

I would like for all of our CT legislators to completely ban fracking wastewater in CT. It should not be transported across our CT borders for any reason.

We cannot process or store this waste in the expectation of making a monetary profit from it. Some of this waste water brings up natural radioactive material from the ground. We can not remove the radioactivity from this waste. Trying to store radioactive waste as is done at our nuclear power plant is an expensive proposition.

To bring this toxic hazardous waste into CT could adversely affect the health of our children, our primary asset and concern.

So, please, no fracking wastewater should be brought into CT.
