

Honorable Sirs:

I support a ban on allowing hydro-fracking waste in Connecticut, for treatment or other type of disposal. Currently, a number of states are reaping the economic benefits of hydrofracking for petroleum products, but want to push the environmental costs onto other states.

Some have said that it isn't right that we buy cheap hydro-fracking energy in Connecticut, but refuse the waste. This is false reasoning.

Connecticut is not able to dictate Federal or other state rules that allow drilling and generation of these wastes. Treating the hydrofracking waste is a cost and a responsibility that should be considered by the regulators in the jurisdictions where fracking is conducted, preferably before the waste is generated.

Connecticut would not permit a highly polluting industry in the state with the understanding that it's okay to send the pollution somewhere else. Why should we accept a problem caused by someone else's lax regulations?

Please do not allow this waste into Connecticut.

Sincerely yours,

Martha M. Smith
