

To Whom It May Concern:

There is no way to adequately treat or safely dispose of fracking wastewater, a toxic byproduct of fracking which poses a huge public health threat. Regulations cannot fully protect Connecticut, which is why we must prohibit fracking waste from entering the state completely. When this waste is hauled long distance over public roads, it poses a huge risk of accidents and spills. This would be devastating to our health and environment in CT. Fracking is too risky for Connecticut and we do not support any measures that would allow such practices.
