

TO ALL CONCERNED:

I support the classification of hydraulic fracturing waste as hazardous in HB 5409. This bill is a step in the right direction, however it requires more comprehensive and inclusive language in order to protect the health and safety of Connecticut's residents. Solely classifying fracking waste as hazardous is insufficient. I urge you to support a statewide ban on all fracking waste.

HB 5409 should also include language that prohibits the procurement, acquisition, possession, storage, handling, treatment, processing, application or disposal of all treated or untreated oil and gas drilling waste byproducts and their constituents for any purpose in the State of Connecticut. As is, the bill is not enough to guarantee a viable future for our state.

**IT IS OF UTMOST IMPORTANCE TO SUPPORT SB237 AS WELL.**

Please stand up for the human race.

Patrice Galterio

Kent Connecticut 06757

*on a side note:*

The entire hydraulic fracturing industry is a dangerous proposition (just the word says it all: FRACTURE {see below definition}) and we as human kind should think twice before we continue this madness..

**FRACTURE: to damage or destroy as if by rupturing; to cause great disorder in; to go beyond the limits of (violate)**
