Regarding HB5036

I am a licensed Physician Assistant and Mother of two boys in the state of CT. I am writing today in support of HB5036.

As a practitioner of ecological wellness I am particularly concerned with the toxic burden our country's children face. With over 80,000 new chemicals on the U.S. market since World War 2 - few of which have ever been tested for safety, none of which having been tested for synergy- it is little wonder that we are raising the first generation of Americans who are expected to live a shorter lifespan than their parents. The onus for protecting children is first and foremost with the parents and in order to be effective they need transparency about the chemicals involved in making the products their children are exposed to. If we have any chance of reversing this horrible trend of increased morbidity and mortality in our beautiful children it will be because we, as parents, finally put our collective foot down and demanded a safer environment. Clear labeling is a the cornerstone of this movement. We should be entitled to know what we are purchasing.

I can be reached for further comment as below.

Thank you for your efforts on behalf of the children of this State.

Sincerely,
Jennifer Boyd, PA-C
