

Why I oppose “Physician Assisted Suicide.” H.B. 5326

Because of the chaotic state of health care, and the immature and amoral bent of society, I feel that a physician or any other medical practitioner is not capable of determining when, if or how a patient's life is cut short. And I am appalled at the title of this bill- this is not suicide, it is murder. Humanity is not equal to the task of judging with compassion and logic to determine when another human being is to be euthanized.

This bill smacks of the sinister, simply legalizing killing without completely understanding what it is that is being proposed.

Legislation that intends to permit this practice is irresponsible at best. What it does put a person in mind of is “The Final Solution” a means to eradicate medical problems, and to get rid of the unwanted, the aged, and the infirm. The prospect of individuals or even a panel making such a decision is SHOAH, a catastrophe.

It is our obligation as moral, ethical and loving human beings to prevent such legislation from becoming a regular practice in our society. It is imperative that those who vote for such a proposal examine their consciences, and conclude that such a bill is amoral, disastrous and untenable.

Please vote NO.
