

Noreen P. Cullen

HB 5543

3/14/14 Public Hearing

To the Members of the Committee on Public Health:

We need stronger protections for the purity of our waterways and drinking water. To weaken the protections we now have is absurd and shameful. The proposed changes to HB 5543 are not only unnecessary, they defeat the purpose of regulating activities that may diminish water quality. Maintenance, repair, and replacement of component parts to the public water supply should not be allowed to compromise water quality. This should be obvious to any thinking person.

I am strongly opposed to the proposed changes to HB 5543 and I ask that you also oppose them for the sake of our water and the health of all who use it.

Most sincerely,

Noreen P. Cullen
