Subject: chemicals used on road

I am very sure the chemicals used on the roads in recent years has definitely made a difference on the rust on my vehicle. I keep my vehicle in my garage and this year I notice the brake line just hanging down loose because whatever was holding it in place had rusted. I, also, noticed rusting under the fenders and several other places on my vehicle. I urge you to conduct a public hearing and begin to study the effects of the use of this chemical...not only on our vehicles but on our drinking water, and plants.
