Dear Mr. Neeley,

The chemical road treatments being used on CT roads today is ruining the undercarriage components of our vehicles. I personally had a break line failure several months ago due to excess corrosion which fortunately did not cause an accident. Toyota had a recall recently caused by auto frame failures. If it hasn't happened already, at some point someone is going to be seriously injured or killed because these chemicals cause premature failure of undercarriage brake line components and should not be used on our roads.

Sincerely,

Don Vallera
Goshen, CT
