I would like to send you some photos of my truck. I just put a new frame in it as the frame cracked . The Chemicals you are using on the roads made the frame on my truck rust/rot away. I work for CL&P as a Mechanic . We get new trucks in all the time and we are constantly replacing fuel tanks and air tanks within two or three years. We are also having problems with wiring, brake valves and brake lines. I have seen brake shoes rot off truck frames. I have replaced so many parts because of these "Chemicals". This is a safety issue, I see this daily. You can't tell me this stuff is not effecting bridges in the state We may save money in some areas but we are going to pay for this big time in the end! I'm sending this as a private citizen.The State said this has not affected there vehicles? I have talked to Mechanics that work for the State and they claim they are are seeing the same thing we are.
