Subject: chemicals used to treat roads

I have definitely noticed a significant increase of rust on my vehicle since the State has begun using magnesium chloride. I noticed the brake line on my vehicle was just hanging loose because whatever was holding it up had rusted. I have, noticed more rust on the under carriage and around the bumpers and tire wells, as well as several other places. I urge you to conduct a Public Hearing and examine the effects of the use of this chemical, not only on our vehicles but on our drinking water, and plants.
