

Testimony in favor of HB 5303

I am writing in support of HB 5305. It is critical for the patient's safety - in this case epileptic children- that they have access to appropriate and evidence based care when they need that care. When one of my grandchildren's friends come to play, his mom drops off an Epi-Pen and we are both comfortable with its use should the need arrive. I do not understand complicating what could be a life saving administration of Diastat to a stricken child. If it is about the child, we allow the administration. If it is about parents decisions on his or her own child's healthcare, we allow the administration.

If it is about anything else, then we are not putting the patient first.
