**Follow Up Flag:** Follow up  
**Flag Status:** Flagged

I support the adoption of electric vehicles in CT because they will reduce air pollution, reduce reliance on fossil fuels and allow the public utility power companies to continue to make money while supporting renewable technologies at the residential level. Our urban centers have been neglected by the energy efficiency funds because of multiple barriers. Last year we were told that power companies objected to allow residents to invest in renewable projects because the power companies will lose money.

So lets establish financial and other incentives to invest in electric vehicles, build more charging stations, and create educational programs in support of electric vehicles. The power companies can see that this is the wave of their future survival as well.
