Filling out permits in Connecticut has become an arduous task.

We at Skyline Solar LLC fill out hundreds of permits in the states of New Jersey, Connecticut, and Massachusetts. We would like to share some insights into why adopting a uniform building and electrical permit form would be beneficial.

- By using a standard application, you ensure that all pertinent information is captured on each form for every town. This will make the process easier for permits to be filled out completely, efficiently, and offers less chance for errors. By using a standardized form, you would also streamline the process for all jobs, ensuring that homeowners and businesses can effectively get the jobs completed in a timely manner.
- In Massachusetts, the majority of towns and cities use one form for building permits and one form for electrical permits. This makes it so much easier for those of us who fill out permits to know what is expected for each form and to fill it out completely and efficiently.
- Money would be saved on having one form for each town as well. By utilizing a standardized form, there is less chance of errors from an organization like ours who fill out hundreds of forms. With less errors, personnel does not need to spend an inordinate amount of time, phone calls and e-mails to ensure the forms are correct.

In conclusion, our recommendation for the State of Connecticut would be to move to a universal form to help streamline the permitting process, decrease errors, ensure uniformity of captured information, and help towns and homeowners speed up their building and electric projects. We welcome the opportunity to discuss this with you further, and we can be reached at (732) 354-3111.

Thank you for letting us express our views on this important subject.

Sincerely,

Pete Debbas
