Subject: Senate Bill 668

I believe providing lethal doses of medications to patients with less than 6 months to live is very dangerous and immoral. What is to prevent family members from putting pressure on the ill person to do it against their will especially if the ill person is dependent on the family for care and support. There is no end to how this could be expanded. Who would trust a doctor who prescribes lethal doses of drugs.

Please do not pass this bill.

Sincerely,
Patricia G. Underwood
