

Feb. 25, 2015 I am a Fairfield CT writing in support of HB6798 a bill that would make notification of GMO contents sold in baby food in Connecticut. Passage of this legislation would effectively detach baby food from the "trigger clause" requirement passage in the already past CT GMO bill that makes us wait by adoption by neighboring states. The reason that I feel strongly on this issue is that any small organism (infant/ small child) is more easily liable to a negative effects from any harmful ingredient including pesticides remaining in the baby food, which may indeed GMO substances with "pesticide tolerant" plant varieties. I wish my state senators and representatives to strongly consider my remarks. Respectfully submitted Dennis Rich gildedage2002@yahoo.com
