

I'm writing to submit my testimony in support of HB 6798 for its public hearing.

I am a CT resident and I reside in New Haven. I strongly urge you to support HB 6798, a bill to label GMOs found in baby food and baby formula. As a father with a wife who is in strong agreement, I am very concerned about feeding my young child products that contain GMOs as I am not convinced of their safety with the very limited testing that has been done SOLELY by the companies that profit from them as evidence of their safety. Furthermore, I am very concerned about the large amounts of herbicides being used on GMO crops and how this affects young children with undeveloped immune systems. As consumers, it is our RIGHT to know which products contain these ingredients so that we can decide if we want to feed them to our children and our families.

Please support mandatory labeling of GMOs.

Thank you.
