

To:Chairs and Members of the Committee on Children

I am writing in support of Raised Bill No. 207, AN ACT CONCERNING FUNDING FOR A LYME DISEASE PREVENTION AND EDUCATION PROGRAM. I believe the Connecticut Department of Health (DPH) should be awarded \$450,000 to implement and sustain a statewide Lyme disease prevention effort combining mass media marketing and community-based education based on the BLAST Lyme prevention model, and funding/working in conjunction with BLAST, which has done a remarkable job of Lyme education and awareness in this part of the state.

This request for funding comes at a time when citizens are increasingly concerned that forty years after the illness was discovered in our state, Connecticut continues to have one of the highest rates of Lyme disease in the country. The problem is even more serious now that we know the same tick species that transmits the agent that causes Lyme also transmits anaplasmosis, ehrlichiosis and babesiosis to people. Research has shown, if employed sufficiently, personal protection measures, and environmental tick-control measures around the home can reduce the number of cases.

While Lyme disease is generally a mild illness when diagnosed and treated quickly, a significant minority of patients (perhaps 20% or so) go on to suffer serious or chronic illness involving multiple body systems, and this underscores the importance of using prevention measures. People at the highest risk for tick-transmitted diseases, including Lyme disease, are children under 10 and adults over 55 years of age.

A commitment of state funds is needed to implement and sustain a statewide prevention program focused on raising awareness of tick-borne disease prevention in 2015.

Sincerely,

*Steve*
