Testimony

Mary Tebo, A.P.R.N.

Submitted to the Public Health Committee

SB#981 Act Concerning Medical Assistant

I Mary Tebo, A.P.R.N., appreciate this opportunity to submit testimony concerning SB#981. An act concerning Connecticut Medical Assistants. I support the concept of this bill as it has been written.

In the Scope of Practice Review Committee Report issued February 2013 by the CDPH they concluded that: a certified medical assistant has been educated and trained to engage in medication administration under the direct supervision of a licensed physician. Accredited education and training programs that lead to certification as a medical assistant have been in place for many years in CT and other states and include coursework and clinical training in pharmacology and medication administration. The AAMA and AMT offer examination and certification programs that could be utilized in CT as the standard for medical assistants who are delegated the task of medication administration. Mandatory certification would ensure that all medical assistants who administer medication have met the same minimum qualifications.

Medical assistants are able to administer medications under the direct supervision of a physician in most other states. Restrictions related to setting types of medication and route of administration vary from state to state. It is anticipated that allowing medical assistants to administer medication, for example routine vaccinations, will enable physicians and nurses who may be practicing with them to see more patients and focus on assessment and clinical care. In reviewing and discussing all of the information provided, the majority of scope of practice review committee members agreed that the concerns that were identified regarding potential quality and safety risks associated with allowing licensed physicians to delegate administration to Certified Medical Assistants can be addressed through legislation.

Medical assistants who attend accredited MA education programs are well trained to perform phlebotomy, and to administer non-intravenous injections, including vaccines. Requiring certification as a CMA(AAMA) or RMA(AMT) goes a long way toward assuring that only properly qualified MA's will administer vaccines.

Medical Assistants work under the direct supervision of physicians (MDs and Osteopaths). The delegating physician remains professionally and legally responsible for the action of his or her unlicensed medical assistant. The concerns expressed by organized nursing interests about medical assistants' assuming too much clinical responsibility are misplaced; the delegating provider is responsible for assuring that the MA has the appropriated training and skills for any clinical task performed and remains responsible for the MA's activities under their direction.

Thank you for consideration of our position on this bill.

Sincerely,

Mary Tebo APRN

Mary Tebo, A.P.R.N.
