

Dear Senator Kennedy,

Please note my support for the banning of pesticide use on all school grounds. The health hazards of pesticides (and herbicides) are enormous. Let's seek out more natural controls and be satisfied with the results even if those results are less than perfect. Good health is far more important than aesthetics.

On another subject, I ask that you lend your support to the Cape Wind project, promoting it in connection with current regional efforts to expand the use of clean, renewable energy. With your connections with the Cape, Vineyard and Nantucket communities, I believe you might be able to reverse the impact of both political and powerful special interest groups that have delayed this project for so many years.

Sincerely,

Bonnie L. Karkowski
