No more fracked gas in Connecticut!

I'm writing to say I am against RHB 1078 and RHB 6985. These bills would expand fracked gas pipeline capacity and make ratepayers subsidize it.

Fracking is bad for the environment, bad for public health, and does not create long-term job stability. We can't afford more fracking in the long run and neither can the planet. Please work instead to increase renewable energy sources, which will make Connecticut a safer, cleaner, more stable place to live for this generation and the generations to come.

Sincerely,

Sarah Strong
