Subject: Raised Bill 7015

I fully support raised bill #7015 which would allow terminally ill patients to request life ending therapy and/or medication, as well as allow doctors to legally prescribe such medication to a patient for self administration upon their request. Additionally, should the patient be disabled and/or not capable (physically, emotionally, religiously, etc.) of self administration, a patients verbal request should be legally sufficient for the doctor(s) to administer the life ending medication upon such request by the patient with no delay whatsoever. The patients word(s) and or request(s) should be the sole and final decision making measurement with no outside interference or delay imposed from any individual, legal entity, or court order.

Thank you for your consideration of my support for raised bill #7015.

Electronically signed,
David Liebenguth
