

5449

Unfortunately I was unable to attend the hearing this morning due to work obligations.

As a business owner and user of vapor products, I feel these bills would do more harm than good.

Vapor has been the best alternative for myself and my husband to leave cigarettes behind.

Neither of us have had the want or need to have a cigarette in over 3 years. We both feel better and healthier.

This is not a tobacco product and should not be classified as such. There is no tobacco in e-juice. It is strictly flavoring, which allows adults like ourselves find something that assist us in staying away from cigarettes. Which comes to the other part of the bill, flavoring. All e-juice is flavored, without the choice of flavors you are taking away are ability to continue vaping and staying off cigarettes.

I believe personally their should be a ban smoking inside public places, such as restaurants and other food establishments. It's just common courtesy not to smoke indoors. But I believe it is necessary for vaping to be allowed in Vapor Businesses, as this helps our customers with providing a comfortable place and atmosphere for them.

I don't believe ejuice flavors are intended to target teens and children, they are just options for adults to choose when vaping.

Putting all these bans in place will adversely effect thousands of people who have finally been able to kick the habit of smoking cigarettes as well as hundreds of small businesses.

I hope you will consider this when you are looking at these bills.

Thank you for your time,

Renee & Sean Gannon
