Hi,

I'm emailing about the importance of passing this bill. If our school nurses and camp counselors are able to administer the necessary drugs to save a life, shouldn't an EMT be able to do the same? Think of the countless lives that could and would be saved by passing this very important bill. I personally know someone who barely made it to the hospital after suffering a heart attack because no meds were able to be given. What if this person hadn't made it in time? Please consider the importance of this

I appreciate your time and consideration.
